

VaxiMums Project – November 2024

Name and details of project using shared data for a secondary purpose

VaxiMums project: Pregnancy loss <24weeks gestation and maternal vaccination

This study will use Primary Sense (PS) data for a research project conducted in collaboration with University of Queensland (UQ). It aligns with the primary purpose for using PS data to assist in the development of community health promotion and prevention activities, and population health planning.

Alignment to Item 7 of the Schedule of Particulars

Data shared with UQ will be completely de-identified and will not allow for re-identification of patients or GPs. All analyses will be made at the regional level, and not at the level of individual general practices.

This is an expanding Multi-PHN project. Gold Coast PHN have completed data collection as part of phase 1; Brisbane North PHN are amongst a group of Queensland PHNs subsequently replicating this.

Approved by

This study has been endorsed by the National Primary Sense Clinical Advisory Group and received Ethics approval by Queensland Health (HREC/2023/MNHA/96960) and Bond University HREC (JS00701).

Expected project timeframe

November 2024 – December 2027.

Progress

Data collection to occur in December 2024.

Date to opt out by

Monday 2 December 2024.

For further information

See [initial research application](#) prepared by the UQ Research Team for their initial approval to the Gold Coast Primary Sense Clinical Advisory Group and the National Primary Sense Clinical Advisory Group.
