

Training Opportunity

Perform peripheral intravenous cannulation

We are excited to offer your practice the opportunity to participate in our fully sponsored perform peripheral intravenous cannulation course.

This hands-on program goes beyond the basics, helping participants understand not just the technique of cannulation but also when to insert, how to choose the correct cannula size and site, and how to manage potential complications.

Participants will:

- assess the need for cannulation and identify relevant pathology requests
- perform and secure a cannulation procedure
- select the appropriate size cannula and insertion site
- manage the cannula until removal
- safely remove IV cannulas and manage complications
- troubleshoot problems as they arise

Places are limited! Practices are invited to nominate one staff member by **Friday, 17 October 2025** to be considered for this fully funded opportunity.

For more information email primarycareevents@brisbanenorthphn.org.au.
